

Building & Painted

Hualamin (Pty) Limited supply a wide range of superior flat building and painted products for the manufacture of roofs, gutters, fascias, panels, components, cladding, ceilings, and many more, limited only by your imagination.

▶ Milltech

▶ Color-Tech 4

▶ Color-Tech PVDF

Color-Tech PVDF combines the well known and proven durability of the Hualamin (Pty) Limited metal with the internationally proven performance of the Kynar 500/Hylar 5000 resin systems and the assurance of a "zero tolerance" quality system.

Color-Tech PVDF is the ultimate choice in aesthetic durability, with which you can leave a legacy for your great grand children and their descendants... a building clad with Color-Tech PVDF, the unique combination of world's most durable coating over the world's most durable metal.

Color-Tech PVDF is specified by leading Building Professionals to beautify commercial, industrial and residential buildings wherever long-term visual impact is required and particularly in inhospitable climatic surroundings

A further differentiation between Color-Tech PVDF and other coatings their unique inert characteristic. Rather like a non-stick frying pan, when it is washed, or more usually subjected to rain, it sheds its grime and dirt and returns to its original pristine appearance, which is so important to the image of any successful business.

ColorTech PVDF offers world class durability in both earth tones and brighter, more difficult colours. It is made from the most durable resin system using only the most stable of ceramic pigments. These ceramic pigments are well known for their stability and durability of colour, offering designers a full range of rich lasting colours.

Unique benefits:

- Resistant to UV attacks.
- Resistant to wind borne sand
- Dirt resistant.
- Reduces maintenance

General uses:

- Façade cladding/paneling
- Corporate Re-imaging
- Highlighted features and flashings
- Roofing and cladding
- Pre-engineered building systems
- Shade products
- Signage
